

HOW CAN I BENEFIT FROM THE GLOBAL FINANCIAL CRISIS?

Everyone (including young people starting out, those with a mortgage, wealth accumulators and retirees) now have the ability to take advantage of the once in a generation opportunities presently available in the share market.

People often think that because of the following reasons they cannot participate in recovering share markets;

- I am already fully invested.
- I have no equity to borrow against.
- I don't want to take too much risk.

Thanks to innovative new solutions, this is no longer the case. Benefit from the current low valuations in the share market to benefit from the eventual recovery!

Clients can now access exposure to the recovery whilst knowing the exact amount of downside in regards to the strategy. You also have the flexibility to 'walk away' from the investment without incurring break costs at anytime.

How Does It Work?

As an example, for a cost of 9% per annum, which may be deductible depending on your tax situation, you can get exposure to a recovering share market over the next 5 years.

ASX200 - 10yr Performance

If you are on a marginal tax rate of 30% for an annual after tax cost of \$3,500 you can get exposure to \$100,000 in the broad share market. You can exit at any point in time with no break costs, meaning you can lock in your profit, and from a risk perspective the only amount you can lose is the annual cost for the period you choose to stay invested which will be between 1-5 years.

The amount of exposure is variable and for as little as \$350 per annum you can participate. So don't be a victim of the European Debt Crisis, benefit from it.

If you would like to find out more about this strategy please contact our office on 1300 132 214 as this opportunity closes in next couple of weeks.

Yours Sincerely
